Although numerous books have been written about the Adirondacks and Adirondackers, not very many have become regional classics. Early authors such as John Todd, Charles Fenno Hoffman, Jephtha R. Simms, S. H. Hammond, J. T. Headly, Alfred B. Street, William H.H. Murray and Verplanck Colvin earned well-deserved popularity in their day and their literary output still exerts a potent appeal more than a century later. One more volume is eminently entitled to consideration as top-bracket upstate literature...and that is Adirondack French Louie by the late Harvey L. Dunham of Utica.

This timely collection of essays - written by nine recognized forestry and environmental specialists - tells the story of the conservation, use, and changes in the Commonwealth's forests over time. The book traces the development of pre-settlement, colonial, and post-Revolutionary War forest practices, and concludes with recommendations as to how history might be used to inform and shape future policy. Underscored is the importance of private and local leadership, such as the unique Massachusetts town forest movement. Economic contributions and educational programs are detailed, as well as the ways Massachusetts' leadership has influenced national forestry. Written for the layperson, and reflecting the particular experience and style of each contributor, the history will appeal to a range of readers from local conservation activists to forestry professionals and policymakers.

Ecosystem research has emerged in recent decades as a vital, successful, and sometimes controversial approach to environmental science. This book emphasizes the idea that much of the progress in ecosystem research has been driven by the emergence of new environmental problems that could not be addressed by existing approaches. By focusing on successes and limitations of ecosystems studies, the book explores avenues for future ecosystem-level research.
