Anatomy And

Physiology Of Nervous

The physiology of the nervous system involves a complex journey of

impulses. Nerve Impulse

Neurons have two major functional properties:

irritability, the ability to respond to a stimulus

and convert it into a

nerve impulse, and

conductivity, the ability

to transmit the impulse to

other neurons, muscles,

The nervous system, along with the endocrine system, controls and integrates the activities of all the body ' s organs and tissues. It receives and processes sensory input from organs such as the eyes, ears and skin, and responds through a variety of effector organs.

The nervous system is  
comprised of two major  
parts, or subdivisions, the  
central nervous system  
(CNS) and the  
peripheral nervous  
system (PNS). The CNS  
includes the brain and  
spinal cord. The brain is  
the body's "control  
center". The CNS has
