Offering guidance to clinical geneticists and neurologists about the mode of inheritance and genetic counselling risks for neurological conditions, this text groups subjects together under such headings as the muscular dystrophies, phakomatoses, peripheral neuropathies, and dementias.

Looks at the field of genetics, covering such topics as autism, DNA, bioethics, cancer, diabetes, eugenics, and pseudogenes.

This book provides clear, detailed descriptions of the most widely-used protein electrophoresis techniques using numbered, step-by-step instructions. Handy tips such as convenient stopping points are also included.

The #1 NEW YORK TIMES Bestseller The basis for the PBS Ken Burns Documentary The Gene: An Intimate History From the Pulitzer Prize-winning author of The Emperor of All Maladies—a fascinating history of the gene and “a magisterial account of how human minds have laboriously, ingeniously picked apart what makes us tick” (Elle). "Sid Mukherjee

has the uncanny ability to bring together science, history, and the future in a way that is understandable and riveting, guiding us through both time and the mystery of life itself." -Ken Burns "Dr. Siddhartha Mukherjee dazzled readers with his Pulitzer Prize-winning *The Emperor of All Maladies* in 2010. That achievement was evidently just a warm-up for his virtuoso performance in *The Gene: An Intimate History*, in which he braids science, history, and memoir into an epic with all the range and biblical thunder of *Paradise Lost*" (The New York Times). In this biography Mukherjee brings to life the quest to understand human heredity and its surprising influence on our lives, personalities, identities, fates, and choices. "Mukherjee expresses abstract intellectual ideas through emotional stories...[and] swaddles his medical rigor with rhapsodic tenderness, surprising vulnerability, and occasional flashes of pure poetry" (The Washington Post). Throughout, the story of Mukherjee's own family—with its tragic and bewildering history of mental illness—reminds us of the questions that hang over our ability to translate the science of genetics from the laboratory to the real world. In riveting and dramatic prose, he describes the centuries of research and experimentation—from Aristotle and Pythagoras to Mendel and Darwin, from Boveri and Morgan to Crick, Watson and Franklin, all the way through the revolutionary twenty-first century innovators who mapped the human

genome. "A fascinating and often sobering history of how humans came to understand the roles of genes in making us who we are—and what our manipulation of those genes might mean for our future" (Milwaukee Journal-Sentinel), The Gene is the revelatory and magisterial history of a scientific idea coming to life, the most crucial science of our time, intimately explained by a master. "The Gene is a book we all should read" (USA TODAY).

One of the greatest challenges facing the food industry is providing safe food to an ever-increasing number of allergic consumers through a global supply chain. Approximately 2-4% of western adults and up to 10% of children are currently thought to be sensitive to food allergens, and the issue is of major commercial significance to food manufacturers. The market for 'free-from' foods has grown dramatically in recent years and the demand for gluten- and dairy-free foods shows no sign of abating in the foreseeable future. This volume provides an overview of the safe management of food allergens, aiming to help all those with a vested interest in understanding how to protect consumer health through good manufacturing practice and clear labelling advice. It examines the risk management systems and practices being adopted by the food industry to tackle the growing hypersensitivity of consumers to

range of food proteins. The various aspects of the subject are addressed from a range of perspectives including that of researcher, food manufacturer, enforcement officer, clinician and consumer. There will be an emphasis on the scientific analysis of food and environmental samples and their use in verifying in-process controls and finished-product labelling claims. The book is directed at food scientists and technologists based in industry and research, quality assurance personnel, clinicians and public health officials.
