This volume contains the proceedings of the XIX International Colloquium on Mechanical Fatigue of Metals, held at the Faculty of Engineering of the University of Porto, Portugal, 5-7 September 2018. This International Colloquium facilitated and encouraged the exchange of knowledge and experiences among the different communities involved in both basic and applied research in the field of the fatigue of metals, looking at the problem of fatigue exploring

simulative approaches.  
Fatigue damage represents  
one of the most important  
types of damage to which  
structural materials are  
subjected in normal  
industrial services that can  
finally result in a sudden  
and unexpected abrupt  
fracture. Since metal alloys  
are still today the most  
used materials in designing  
the majority of components  
and structures able to carry  
the highest service loads,  
the study of the different  
aspects of metals fatigue  
attracts permanent attention  
of scientists, engineers and  
designers.
