This Element provides an overview of cultural entrepreneurship scholarship and seeks to lay the foundation for a broader and more integrative research agenda at the interface of organization theory and entrepreneurship. Its scholarly agenda includes a range of phenomena from the legitimization of new ventures, to the construction of novel or alternative organizational or collective identities, and, at even more macro levels, to the emergence of new entrepreneurial possibilities and market categories. Michael Lounsbury and Mary Ann Glynn develop novel theoretical arguments and discuss the implications for mainstream entrepreneurship research, focusing on the study of entrepreneurial processes and possibilities.

Building theories of organizations is challenging: theories are partial and "folk" categories are fuzzy. The commonly used tools--first-order logic and its foundational set theory--are ill-suited for handling these complications. Here, three leading authorities rethink organization theory. Logics of Organization Theory sets forth and applies a new language for theory building based on a nonmonotonic logic and fuzzy set theory. In doing so, not only does it mark a major advance in organizational theory, but it also draws lessons for theory building elsewhere in the social sciences. Organizational research typically analyzes organizations in categories such as "bank," "hospital," or "university." These categories have been treated as crisp analytical constructs designed by researchers. But sociologists increasingly view categories as constructed by audiences. This book builds on cognitive psychology and anthropology to develop an audience-based theory of organizational categories. It applies this framework and the new language of theory building to organizational ecology. It reconstructs and integrates four central theory fragments, and in so doing reveals unexpected connections and new insights.

New organizations do not emerge full blown from the idiosyncratic minds of individual entrepreneurs. Their ideas for new organizations, their ability to acquire capital and other essential resources, and their likelihood of survival as entrepreneurs derive from the contexts in which they live and work. The Entrepreneurship Dynamic explores the conditions that prompt the founding of large numbers of new organizations or entirely new industries, and the effects on existing industries, economies, and societies.

Hannan and Freeman examine the ecology of organizations by exploring the competition for resources and by trying to account for rates of entry and exit and for the diversity of organizational forms. They show that the destinies of organizations are determined more by impersonal forces than by the intervention of individuals.
