A balanced nuclear reaction equation indicates that there is a rearrangement during a nuclear reaction, but of subatomic particles rather than atoms. Nuclear reactions also follow conservation laws, and they are balanced in two ways: The sum of the mass numbers of the reactants equals the sum of the mass numbers of the products.

To balance the equation above for mass, charge, and mass number, the second nucleus on the right side must have atomic number 2 and mass number 4; it is therefore also helium-4. The complete equation therefore reads:  $6/3\text{Li} + 2/1\text{H} \rightarrow 4/2\text{He} + 4/2\text{He}$   $3/6\text{Li} + 1/1\text{H} \rightarrow 2/4\text{He} + 2/4\text{He}$ . Or, more simply:
