How to grasp and apply: business graphs; percentages and ratios; the stock exchange - share prices; introduction to statistics; break-even analysis; project evaluation methods and management account analysis. Business calculation skills in the corporate world today are astonishingly weak. The main reason for this, David Zidel has found, is that many people have a completely irrational fear of numbers. Others may have skills that have become rusty, and some have only minimal numerical abilities. Basic Business Calculations will show you how easy it really is to become adept at the most commonly used business calculations. It focuses on practical, simple examples and it takes the user through the basics, without assuming much prior knowledge and following a step-by-step approach, until clear understanding is reached. This updated edition includes a chapter on personal financial fitness which covers topics such as home loan repayments, credit card debt and how to accumulate wealth through systematic savings.

Error Reduction in Health Care Completely revised and updated, this second edition of Error Reduction in Health Care offers a step-by-step guide for implementing the recommendations of the Institute of Medicine to reduce the frequency of errors in health care services and to mitigate the impact of errors when they do occur. With contributions from noted leaders in health safety, Error Reduction in Health Care provides information on analyzing accidents and shows how systematic methods can be used to understand hazards before accidents occur. In the chapters, authors explore how to prioritize risks to accurately focus efforts in a systems redesign, including performance measures and human factors. This expanded edition covers contemporary material on innovative patient safety topics such as applying Lean principles to reduce mistakes, opportunity analysis, deductive adverse event investigation, improving safety through collaboration with patients and families, using technology for patient safety improvements, medication safety, and high reliability organizations. The Editor

This book presents some definitions and concepts applied in Latin America on lean manufacturing (LM), the LM tools most widely used and human and cultural aspects that most matter in this field. The book contains a total of 14 tools used and reported by authors from different countries in Latin America, with definition, timeline with related research, benefits that have been reported in literature and case studies implemented in Latin American companies. Finally, the book presents a list of softwares available to facilitate the tools' implementation, monitoring and improvement.

Imaging Informatics Professionals (IIPs) have come to play an indispensable role in modern medicine, and the scope of this profession has grown far beyond the boundaries of the PACS. A successful IIP must not only understand the PACS itself, but also have knowledge of clinical workflow, a base in several medical specialties, and a solid IT capability regarding software interactions and networking. With the introduction of a certification test for the IIP position, a single source was needed to explain the fundamentals of imaging informatics and to demonstrate how those fundamentals are applied in everyday practice. Practical Imaging Informatics describes the foundations of information technology and clinical image management, details typical daily operations, and discusses rarer complications and issues.

The first comprehensive study in English of the earliest and largest 'Third-World' migration into pre-war Europe. Full attention is given to the relationship between the society of emigration, undermined by colonialism, and processes of ethnic organisation in the metropolitan context. Contemporary anti-Algerian racism is shown to have deep roots in moves by colonial elites to control and police the migrants and to segregate them from contact with Communism, nationalist movements and the French working class.
