The African Herbal Pharmacopoeia (AfrHP) provides comprehensive, up to date botanical, commercial and phytochemical information on over fifty of the most important African medicinal plants. The technical data were made on plant samples sourced from across the continent. These monographs prepared by leading African scientists, have been reviewed by international experts. Additional data includes micro morphology of the plant material, distribution maps and TLC Chromatograms. These data are crucial for producers, collectors and traders in medicinal plants and extracts as well as researchers, manufacturers and practitioners. The scope, quality and standard of these herbal monographs are comparable to those prepared in Europe, North America and Asia. Whilst this is the very first edition, it is being proposed to proceed to a second edition, quickly, as more plant species will be covered.

The term phytomedicine was coined by French physician Henri Leclerc in 1913. Till recently phytomedicine has remained in the background. But due to emerging challenges to the conventional pharmaceutical industry (cost effectiveness and potency of the drugs), phytomedicine has made a dramatic comeback. Phytomedicine has witnessed several changes and several new concepts have been introduced. Phytomedicine, although, a separate discipline, is strongly linked to Phytotherapy and Phytopharmacology. As the title suggests the book is an attempt to bridge the gap between fundamental and emerging concepts in this field of medicine. The book has been divided into two parts. Part A deals

with core issues of the phyto-pharmaceutical drug industry. The book begins with an introductory chapter dealing with basic definitions with phytomedicine. Chapters 2-5 narrate emerging subjects such as Phytopharmacovigilance, Phytopharmacoeconomics, Phytopharmacoepidemiology and Phytopharmacogenomics. Chapter 6 discusses ethical issues in phytomedicine. Chapter 7 covers recent advances in drug delivery systems in phytomedicine whereas Chapter 8 is about application of nanotechnology in the field of phytomedicine. The further chapters cover metabolomics, regulatory and legal aspects of the phyto-pharmaceutical drug industry. The chapter on herbal bioavailability enhancing agents is the salient feature of Part-A. Part B is related to applied research in the field of phytomedicine. Experimental findings on phyto-bioactive agents such as withanolides, steroidal alkaloids, phytosteroids and phytocannabinoids have been elaborated. Nine annexures related to herbal drug registration are included.

Botanicals have become widely used in many beauty products and for the purpose of aromatherapy. Phytochemistry-the chemistry of plants, plant processes, and plant products-is of great interest to those involved with both the medicinal and cosmetic properties of botanicals. *Botanicals: A Phytocosmetic Desk Reference* is the first reference to approach this popularly treated topic from a scientific point of view. It offers a clear, organized approach to plant constituents, properties, and cosmetic applications and covers the most common folkloric use of botanicals. By providing an overview of the most important botanicals in use today, this reference will be of great use to phytochemists, cosmetic chemists, herbalists, and aromatherapists. Topics include:

This report is structured in five parts: national framework for traditional and complementary medicine (T&CM); product regulation; practices and practitioners; the challenges faced by countries; and, finally, the country profiles. Apart from the section on practices and practitioners, the report is consistent with the format of the report of the first global survey in order to provide a useful comparison. The section on practices and practitioners, which covers providers, education and health insurance, is a new section incorporated to reflect the emerging trends in T&CM and to gather new information regarding these topics at a national level. All new information received has been incorporated into individual country profiles and data graphs. The report captures the three phases of progress made by Member States; that is, before and after the first WHO Traditional Medicine Strategy (1999-2005), from the first global survey to the second global survey (2005-2012) and from the second survey to the most recent timeline (2012-2018).

Produced by the British Pharmacopoeia Commission Secretariat, The British Pharmacopoeia (BP) 2010 is the leading collection of standards for UK medicinal products and pharmaceutical substances. Now used in almost 100 countries, the BP remains an essential reference for all individuals and organisations working within pharmaceutical research and development, manufacture, and testing across the globe. Key Features: Legally effective in the UK from 1 January 2010, 40 new monographs for formulated preparations, New and revised monographs for Herbal and Complementary Medicines within their own section in Volume III, Additional standards for widely used unlicensed formulations, and European Pharmacopoeia 6th edition material up to and including Supplement 6.5. European Pharmacopoeia monographs are clearly distinguished and cross-referenced while a full index ensures easy access to the current legally binding UK standards.

The rise of evidence-based healthcare has put emphasis on finding specific evidence. Trying to find exactly the right article you are looking for can be vital especially when meeting a tight deadline or trying to find evidence for a particular treatment. This book from the *Harnessing Health Information* series shows the reader how to find the exact article quickly and efficiently. Fully referenced, it includes
