Sample Mean:  $\bar{x} = \frac{\sum x}{n}$ ,  
pronounced  $\bar{x}$ .  $n$  is the  
size of the sample.  $x$   
represents a data value.  $\sum x$   
means to add up all of the  
data values. The value for  $\bar{x}$   
is used to estimate  $\mu$  since  
 $\mu$  can't be calculated in  
most situations. Example
