learning the
necessary
mathematics
specifically used to
describe and

chapters develop
and examine
several
mathematical
models consisting

complex variables,
linear equations
and matrices,
various types of
signals, solutions of
differential
equations,
convolution, filter
designs, and the
widely used
Laplace and Fourier
transforms. The
book also presents
a discussion of

and the Lambert W-function are provided in the appendices. The book has the following features:
Compares linear circuits and mechanical systems that are modeled by similar ordinary differential equations, in order
