An affordable, easily scannable training guide designed for up to five days of instructor-led training.

This book highlights the latest in educational technology. Here are ideas that are not only intellectually intriguing but also practical and practice-building, inspiring educators to move beyond traditional teaching roles toward learning design.

This ILT Series course teaches students about IT project management. Students will learn about the systems approach to project management, develop a project plan, identify the key elements of project scope management, and define schedules and activities that related to IT project management.

In April 2003, The Association for Learning Technology (ALT) celebrated its tenth anniversary and this book has been produced in order to commemorate this landmark achievement. It represents a collaboration between key members of ALT and members of ALTs' sister organisations: SURF in Holland and ASCILITE in Australia. The aims of the book are to use the topic of "institutional implementation" to present a review of the impact of learning technology on tertiary education over the past few years; and to highlight and discuss key changes and developments that are shaping present and future activities and consider the implications for individual enthusiasts who work in the field of learning technology. The book outlines the context in which individual enthusiasts have operated and institutional implementation has occurred over the last ten years. Four key themes are highlighted throughout the book: \* the individual enthusiast and their role in institutional implementation; \* the institutional enthusiast and their role in local and global e-learning initiatives; \* finding the evidence to justify enthusiasm and underpin implementation; \* reinventing the individual enthusiast.

An affordable, easily scannable one-day training guide designed for use in instructor-led training courses.

Education in today's technologically advanced environments makes complex cognitive demands on students pre-learning, during, and post-learning. Not surprisingly, these analytical learning processes--metacognitive processes--have become an important focus of study as new learning technologies are assessed for effectiveness in this area.Rich in theoretical models and empirical data, the International Handbook of Metacognition and Learning Technologies synthesizes current research on this critical topic. This interdisciplinary reference delves deeply into component processes of self-regulated learning (SRL), examining theories and models of metacognition, empirical issues in the study of SRL, and the expanding role of educational technologies in helping students learn. Innovations in multimedia, hypermedia, microworlds, and other platforms are detailed across the domains, so that readers in diverse fields can evaluate the theories, data collection methods, and conclusions. And for the frontline instructor, contributors offer proven strategies for using technologies to benefit students at all levels. For each technology covered, the Handbook: Explains how the technology fosters students' metacognitive or self-regulated learning.Identifies features designed to study or support metacognitve/SRL behaviors.Reviews how its specific theory or model addresses learners' metacognitive/SRL processes.Provides detailed findings on its effectiveness toward learning.Discusses its implications for the design of metacognitive tools.Examines any theoretical, instructional, or other challenges.These leading-edge perspectives make the International Handbook of Metacognition and Learning Technologies a resource of great interest to professionals and researchers in science and math education, classroom teachers, human resource researchers, and industrial and other instructors.

"This 10-volume compilation of authoritative, research-based articles contributed by thousands of researchers and experts from all over the world emphasized modern issues and the presentation of potential opportunities, prospective solutions, and future directions in the field of information science and technology"--Provided by publisher.

This guide to curriculum studies will help to form a better understanding of planning and development. Written for experienced and student teachers seeking teaching and training qualifications, it encourages the user to learn through doing.
