Following the success of the first (1995) edition, this fully updated report will provide a global overview of the use of automotive plastics and composites in passenger vehicles, with an analysis of markets and trends to the year 2007. Special attention is given to vehicle weight reduction. For a PDF version of the report please call Tina Enright on +44 (0) 1865 843008 for price details.

Volume One traces the history of Opel and Vauxhall separately from inception through to the 1970s and thereafter collectively to 2015. Special attention is devoted to examining innovative engineering features and the role Opel has taken of providing global platforms for GM. Each model is examined individually and supplemented by exhaustive supporting specification tables. The fascinating history of Saab and Lotus begins with their humble beginnings and examines each model in detail and looks at why these unusual marques came under the GM Banner. Included is a penetrating review of Saab through to its unfortunate demise. Volume Two examines unique models and variations of Chevrolet and Buick manufactured in the Southern

Hemisphere and Asia but never offered in North America. Daewoo, Wuling and Baojun are other Asian brands covered in detail. This volume concludes with recording the remarkable early success of Holden and its continued independence through to today. Volume Three covers the smaller assembly operations around the world and the evolution of GM's export operations. A brief history of Isuzu, Subaru and Suzuki looks at the three minority interests GM held in Asia. The GM North American model specifications are the most comprehensive to be found in a single book. Global and regional sales statistics are included. GM executives and management from around the globe are listed with the roles they held. An index ensures that these volumes serve as the ideal reference source on GM.

Car Design Asia is the third volume in a series on automotive history. Learn how this continent rose to the top in car manufacturing. Starting with Japan in the 1950s, and in later decades Korea and China, Asian automotive technology has gradually become a presence to be reckoned with on the international stage. Initially a smaller player compared to Europe and the United States, Asia's automobile industry has consistently grown to its current status as one of the most dynamic global forces in terms of form and function. At the forefront of both technology and design, Asian cars include some of the most commercially successful automobiles ever built.

"This pioneering study of United States direct investment in Japan will interest academic specialists, business managers, and government policymakers in America, Japan, and elsewhere. Drawing on rich historical materials from both sides of the Pacific, including corporate records and government documents never before made public, Mason examines the development of both Japanese policy towards foreign investment and the strategic responses of American corporations. This history is related in part through original case studies of Coca-Cola, Dow Chemical, Ford, General Motors, International Business Machines, Motorola, Otis Elevator, Texas Instruments, Western Electric, and Victor Talking Machine. The book seeks to explain why a little foreign direct investment has entered modern Japan. In contrast to the widely held view that emphasizes an alleged lack of effort on the part of foreign corporations, this study finds that Japanese restrictions merit greater attention. Many analysts of the modern Japanese political economy identify the Japanese government as the key actor in initiating such restrictions. Mason finds that the influence of Japanese business has often proved more potent than these analysts suggest. This book offers fresh insights into both the operation of the modern Japanese political economy and of its relations with the world economy."

This book explores the unfinished India – Pakistan Trade normalisation agenda (building upon the themes covered in the book “ India-Pakistan Trade: Strengthening Economic Relations ” published by Springer in 2014) and discusses the steps that must be undertaken in order to move the bilateral engagement forward. Given the commencement of bilateral state-level talks and the Indian government ’ s emphasis on South Asian integration, it adds impetus to the trade liberalisation process, while also providing essential recommendations for policymakers in both countries. The unfinished agenda faces obstacles such as the list of items for which export from India to Pakistan continues to be restricted; lack of land borders and seamless cross-border transport services, which hampers the realisation of trade potential; negative reporting in the media, which influences traders ’ perceptions; and the continued occurrence of informal trade resulting from inadequacies of formal trade relations. The book examines various sectors, including the agricultural, textiles, automotive and pharmaceutical industries, given their predominance on the list of restricted items for bilateral trade. It also covers studies on unconventional and under-researched themes concerning informal trade, informational barriers to India – Pakistan trade, and opening new land borders for trade – all of which can play a facilitating role in realizing the untapped trade potential between India and Pakistan. The book also includes the second round of the India – Pakistan trade perception survey, which identifies impediments to India – Pakistan bilateral trade and assesses the change in traders ’ perceptions since the

first round of the survey, which was published in 2014.

A year's worth of vital industry data plus analysis that helps you plan for the future.
