This revision of the classic textbook in endocrinology will offer all of the advantages found in earlier editions of Hadley's "Endocrinology," including clear explanations, interesting applications, and in-depth coverage of vertebrate hormones. In addition, chapters are now presented in a lecture-friendly format, with headers summarizing each of the major concepts. As in earlier editions, basic principles of molecular, cellular, and integrative endocrinology are presented early, along with an updated guide to current research and methodologies. Following chapters contain discussions of each of the major endocrine systems, supplemented with the most important and interesting new information. Neuroendocrine and reproductive systems are the specialty of the new co-author of this edition, and corresponding chapters have been appropriately increased in coverage. Special features of this new edition include... 1. Expanded explanations of basic concepts 2. Updated information on research methodologies 3. Latest research findings added to chapters on each endocrine system 4. Additional diagrams and figures 5. Printed with second color scheme. 6. New "Think, Analyze, and Discuss" review questions For health professionals, veterinarians, pharmacologists, and anyone in a field where endocrinology is the focus.

The relationship between science and theology has been a crisis for humanity since Darwin's publication of Origin of Species that affects the very core of scientific and Biblical truths with serious consequences. In this detailed and absorbing book Dr. Cherian provides astounding facts of science that were deciphered in the last 500 years, each of which is recorded in the Biblical Scriptures. Heading back to the Biblical account of creation, Dr. Cherian takes the readers from the erroneous notion of the origin of the universe without a cause and abiogenesis as the source of life to the latest scientific discoveries that corroborate the Biblical evidence for divine creation of the universe, life and species that dispel Darwinian evolution. The Origins of the Universe, Life and Species sheds much light for a better understanding of the Scriptures that were hidden to many scientists, researchers and students to relate the scientific discoveries that reveal the Biblical truths for a better appreciation of the unknown God who reveals himself through the many scientists and their discoveries. Dr. Cherian, uses all branches of science from astronomy to zoology connecting the dots between science and theology that stretches from the highest of heavens (outer space) to the deepest of ocean floor revealing the unknown God to be the KNOWN GOD.

The biological sciences cover a broad array of literature types, from younger fields like molecular biology with its reliance on recent journal articles, genomic databases, and protocol manuals to classic fields such as taxonomy with its scattered literature found in monographs and journals from the past three centuries. Using the Biological Literature: A Practical Guide, Fourth Edition is an annotated guide to selected resources in the biological sciences, presenting a wide-ranging list of important sources. This completely revised edition contains numerous new resources and descriptions of all entries including textbooks. The guide emphasizes current materials in the English language and includes retrospective references for historical perspective and to provide access to the taxonomic literature. It covers both print and electronic resources including monographs, journals, databases, indexes and abstracting tools, websites, and associations—providing users with listings of authoritative informational resources of both classical and recently published works. With chapters devoted to each of the main fields in the basic biological sciences, this book offers a guide to the best and most up-to-date resources in biology. It is appropriate for anyone interested in searching the biological literature, from undergraduate students to faculty, researchers, and librarians. The guide includes a supplementary website dedicated to keeping URLs of electronic and web-based resources up to date, a popular feature continued from the third edition.

Revised by the American Medical Association (AMA), Graduate Medical Education Directory, 2012-2013 (Green Book) contains comprehensive information on 9,000 Accreditation Council for Graduate Medical Education-accredited programs (GME) in the United States, including Residency, Fellowship, and Combined programs, plus residency application and career-planning resources. Revisions and updates: specialty/subspecialty information, Match data, 215 new programs, and 3,000 teaching institutions.

'Jon Macks is one of the greatest comedy writers of all time.'—Chris Rock A hilarious, revealing look behind the history and culture of American late-night TV, by a longtime comedy writer for The Tonight Show with Jay Leno. Ever since Johnny Carson first popularized the late-night talk show in 1962 with The Tonight Show, the eleven p.m. to two a.m. comedy time slot on network television has remained an indelible part of our national culture. More than six popular late-night shows air every night of the week, and with recent major shake-ups in the industry, late-night television has never been more relevant to our public consciousness than it is today. Jon Macks, a veteran writer for The Tonight Show with Jay Leno, takes us behind the scenes of this world for an in-depth, colorful look at what really makes these hosts the arbiters of public opinion. From the opening monologue—what's funny, what's dangerous, what's untouchable—to the best vs. worst guests, Macks covers the landscape of late-night comedy and punctuates the narrative with hysterical personal anecdotes, shining the spotlight on some of the very best late night jokes, and drawing from more than half a million of his own jokes written over the span of twenty years. With an insider's expertise and a laugh-out-loud voice, Macks explains how late-night TV redefines the news and events of any given day, reshapes public opinion, and even creates our national zeitgeist.

Covers diseases, disorders, treatments, procedures, specialties, anatomy, biology, and issues in an A-Z format, with sidebars addressing recent developments in medicine and concise information boxes for all diseases and disorders.

Physical Assessment of the Newborn, 5th Edition, is a comprehensive text with a wealth of detailed information on the assessment of the newborn. This valuable and essential resource illustrates the principles and skills needed to gather assessment data systematically and accurately, and also provides a knowledge base for interpretation of this data. Coverage addresses: gestational assessment, neurologic assessment, neonatal history, assessment of the dysmorphic infant, and systemic evaluation of individual body systems, as well as key information on behavioral and pain assessment, including the use of specific tools with various groups ranging from term to extremely preterm infants. Numerous tables, figures, illustrations, and photos, many of them in full color, are a major strength that enhances the book ' s usefulness as a clinical resource. The text is an excellent teaching tool and resource for anyone who performs newborn examinations including nurses, neonatal and pediatric nurse practitioners, nurse-midwives, physicians and therapists. It can also serve as a core text for any program preparing individuals for advanced practice roles in neonatal care. KEY FEATURES: An authoritative and renowned text that comprehensively addresses all key aspects of newborn assessment Provides a well-ordered evaluation of individual body systems. Assists the practitioner in identifying infant state, behavioral clues, and signs of pain, facilitating individualized care. Comprehensively addresses the tremendous range of variation among newborns of different gestational ages. The content is amplified by numerous photos and illustrations, many in full color Includes Power Point slides and an Image Bank

This book is about some logical philosophical and methodological problems that arise in the study of behavior and mind, as well as in the treatment of behavioral and mental disorders. It deals with such questions as "What is behavior a manifestation of?", "What is mind, and how is it related to matter?", "Which are the positive legacies, if any, of the major psychological schools?", "How can behavior and mind best be studied?", and "Which are the most effective ways of modifying behavioral and mental processes?" These questions and their kin cannot be avoided in the long run because they fuel the daily search for better hypotheses, experimental designs, techniques, and treatments. They also occur in the critical examination of data and theories, as well as methods for the treatment of behavioral and mental disorders. All students of human or animal, normal or abnormal behavior and mind, whether their main concern is basic or applied, theoretical or empirical, admit more or less tacitly to a large number of general philosophical and methodological principles.

The Organizing Committee of the 15th International Conference on Bioactive Lipids in Cancer, Inflammation and Related Diseases compiled a group of junior investigators to provide reviews on the topics they presented at the Puerto Vallarta Bioactive Lipids conference, as part of the book series, Advances in Experimental Medicine and Biology (AEMB). The book in this series will be titled Bioactive Lipids in Cancer, Inflammation and Related Diseases. Topics range from all classes of lipids including prostaglandins, resolvins, spingolipids, P450-derived lipids, endocannabinoids and phospholipids. The focus includes physiology, cell biology, and structural studies in organisms from bacteria to humans and how these studies addressed the role of lipids in various disease i.e. cancer, inflammation, diabetes, obesity, cardiovascular disease and others.
