mathematics and
packaged it all together

Designing the engine to work as a system of related components is no small task, but the ease with which Baechtel escorts the reader through the process makes this book perfect for both the budding engine enthusiast and the professional builder.

When it comes to their

personal transportation, today's youth have shunned the large, heavy performance cars of their parents' generation and instead embraced what has become known as the "sport compact"--smaller, lightweight, modern sports cars of predominantly Japanese manufacture. These cars

respond well to performance modifications due to their light weight and technology-laden, high-revving engines. And by far, the most sought-after and modified cars are the Hondas and Acuras of the mid-'80s to the present. An extremely popular method of improving vehicle performance is a

process known as engine swapping. Engine swapping consists of removing a more powerful engine from a better-equipped or more modern vehicle and installing it into your own. It is one of the most efficient and affordable methods of improving your vehicle's performance. This book covers in

detail all the most popular performance swaps for Honda Civic, Accord, and Prelude as well as the Acura Integra. It includes vital information on electrics, fit, and drivetrain compatibility, design considerations, step-by-step instruction, and costs. This book is must-have for the Honda enthusiast.

Walter Benjamin's magnum opus was a book he did not live to write. In *The Dialectics of Seeing*, Susan Buck-Morss offers an inventive reconstruction of the *Passagen Werk*, or *Arcades Project*, as it

might have taken form.

Working with

Benjamin's vast files of citations and

commentary which

contain a myriad of historical details from the dawn of consumer

culture, Buck-Morss

makes visible the

conceptual structure that

gives these fragments

philosophical

coherence. She uses

images throughout the book to demonstrate that Benjamin took the debris of mass culture seriously as the source of philosophical truth. The Paris Arcades that so fascinated Benjamin (as they did the Surrealists whose "materialist metaphysics" he admired) were the prototype, the 19th

century "ur-form" of the modern shopping mall. Benjamin's dialectics of seeing demonstrate how to read these consumer dream houses and so many other material objects of the time—from air balloons to women's fashions, from Baudelaire's poetry to Grandville's cartoons—as anticipations of social utopia and,
