The April 2018 Global Financial Stability Report (GFSR) finds that short-term risks to financial stability have increased somewhat since the previous GFSR. Medium-term risks are still elevated as financial vulnerabilities, which have built up during the years of accommodative policies, could mean a bumpy road ahead and put growth at risk. This GFSR also examines the short- and medium-term implications for downside risks to growth and financial stability of the riskiness of corporate credit allocation. It documents the cyclical nature of the riskiness of corporate credit allocation at the global and country levels and its sensitivity to financial conditions, lending standards, and policy and institutional settings. Another chapter analyzes whether and how house prices move in tandem across countries and major cities around the world—that is, global house price synchronicity.

markets, has supported a recovery in capital flows. In advanced economies, weaker growth has been mitigated by the prospect of further monetary accommodation. Despite this decrease in short-term risk, the report finds that medium-term risks continue to build. The political climate is unsettled in many countries, making it more difficult to tackle legacy problems. Financial institutions in advanced economies face a number of structural and cyclical challenges. Corporate leverage in emerging markets remains high and would fall only gradually under the report 's baseline scenario. Policymakers need a more potent and balanced policy mix to deliver a stronger path for growth and financial stability. There is an urgent need to raise global growth, strengthen the foundations of the global financial system, and bolster confidence. The report also examines how the rise of nonbank financing has altered the impact of monetary policy and finds that the fears of a decline in the effectiveness of monetary policy are unfounded. It appears that the transmission of monetary policy is in fact stronger in economies with larger nonbank financial sectors. Finally, the report examines the link between corporate governance, investor protection, and financial stability in emerging market economies. It finds that the improvements over the past two decades have helped bolster the resilience of their financial systems. These benefits strengthen the case for further reform.
