Differential Equations - Fourier Series
(Practice Problems)

The Fourier series for $f(t)$ has zero constant term, so we can integrate it

Get Free Fourier Series Problems And Solutions

term by term to get the Fourier series for $h(t)$; up to a constant term given by the average of $h(t)$. Since $h(t)$ is odd, its average is 0. The rest of the series is computed below. $h(t) + c = \int (f(t) + 1) dt = 4 \int \cos t \cos(3t) dt + \int \cos(5t) dt$

18.03 Practice Problems on Fourier

Get Free Fourier Series Problems And Solutions

Series { Solutions

Boundary-value problems seek to determine solutions of partial differential equations satisfying certain prescribed conditions called boundary conditions. Some of these problems can be solved by use of Fourier series (see Problem 13.24).

Get Free Fourier Series Problems And Solutions

EXAMPLE. The classical problem of a vibrating string may be idealized in the following way. See Fig. 13-2.

Solutions Archives ...

$$f(x) = \sum_{n=0}^{\infty} A_n \cos\left(\frac{n\pi x}{L}\right) + \sum_{n=1}^{\infty} B_n \sin\left(\frac{n\pi x}{L}\right)$$

So, a Fourier series is, in some way a combination of the Fourier sine and Fourier cosine series. Also, like the Fourier sine/cosine series we 'll not worry about whether or not the series

Get Free Fourier Series Problems And Solutions

will actually converge to $f(x)$ or not at this point.

1) The function is odd and piecewise C

Get Free Fourier Series Problems And Solutions

without vertical half tangents, and with discontinuities at $t = (2p + 1) \pi$, $p \in \mathbb{Z}$. It therefore follows from the main theorem that the Fourier series is convergent with the sum function $f(t) = \begin{cases} f(t) & \text{for } t \neq (2p + 1)\pi, p \in \mathbb{Z} \\ 0 & \text{for } t = (2p + 1)\pi, p \in \mathbb{Z} \end{cases}$. 2) The function f is odd, so $a_n = 0$, and $b_n = 2 \int_0^{\pi} f(t) \sin nt dt$.

Examples of Fourier series

The function $F(x)$ is the cosine Fourier expansion of f . On the domain of f , that is, for $x \in [0,7]$, we have $F(x) = f(x)$. Therefore, since $3 \in [0,7]$, then $F(3) = f(3) = 2e - 12$. For the negative values of x , the cosine series

Get Free Fourier Series Problems And Solutions

converges to the even extension of $f(x)$, which is $2e^{-4|x|}$. Therefore, $F(-2) = f(2) = 2e^{-8}$.
