Partial Differential Equations with solutions. New exact solutions to linear and nonlinear equations are included. The text pays special attention to equations of the general form, showing their dependence upon arbitrary functions. At the beginning of each section, basic solution methods for the corresponding types of differential equations are outlined and specific examples are considered.

A partial differential equation of order one in its most general form is an equation of the form  $F(x, u, u_0, \dots, u_n) = 0$  where the unknown is the function  $u(x_1, \dots, x_n)$  of  $n$  real variables. Here, we will not consider problems of such generality but will focus instead on a smaller class of problems.

Handbook of first order partial differential equations ...

A partial differential equation (or briefly a PDE) is a mathematical equation that involves two or more independent variables, an unknown function (dependent on those variables), and partial derivatives of the unknown function with respect to the independent variables. The order of a partial differential equation is the order of the highest derivative involved.
