"The world water problems are a due to bad governance, not to physical water scarcity." This book is inspired by this statement and explores whether it holds in a specific country, Spain, where climatic conditions – Spain is one of the most arid countries of the European Union - would fully justify saying that water problems are due to physical water scarcity. The metrification of water uses and their monetary value is a first important step in understanding how reallocation of water among users could help mitigating many of current water problems in Spain. However, water reallocation among users or from users to nature is far from simple. Initiatives portrayed as the solution to the water governance 'jigsaw' – e.g. water trade, improved water use efficiency, users collective action, public participation – are not free of difficulties and shortcomings. The book explores the growing need for maintaining Spain's natural capital and the human component of water governance – people's needs, wishes, (vested) interests, aspirations – that often determine the result of decisions and, sometimes, lead water management to a deadlock. This book takes a step forward in showing a more complex - and also closer to reality - picture of water governance in Spain.

Both in the Asia Pacific region and in Latin America, considerable confusion surrounds the concept of 'open regionalism' and casts doubt on its relevance for practical purposes. This study surveys the literature on the subject.

Tremendous progress has been made in the field of remediation technologies since the second edition of Contaminant Hydrogeology was published two decades ago, and its content is more important than ever. Recognizing the extensive advancement and research taking place around the world, the authors have embraced and worked from a larger global perspective. Boving and Kreamer incorporate environmental innovation in studying and treating groundwater/soil contamination and the transport of those contaminants while building on Fetter's original foundational work. Thoroughly updated, expanded, and reorganized, the new edition presents a wealth of new material, including new discussions of emerging and potential contaminant sources and their characteristics like deep well injection, fracking fluids, and in situ leach mining. New sections cover BET and Polanyi adsorption potential theory, vapor transport theory, the introduction of the Capillary and Bond Numbers, the partitioning interwell tracer testing technique for investigating NAPL sites, aerial photographic interpretation, geophysics, immunological surveys, high resolution vertical sampling, flexible liner systems, groundwater tracers, and much more. Contaminant Hydrogeology is intended as a textbook in upper level courses in mass transport and contaminant hydrogeology, and remains a valuable resource for professionals in both the public and private sectors.

In the last ten to fifteen years, profound structural reforms have moved Latin America and the Caribbean from closed, state-dominated economies to ones that are more market-oriented and open. Policymakers expected that these changes would speed up growth. This book is part of a multi-year project to determine whether these expectations have been fulfilled. Analysing the impact of the reforms on employment it is argued that expectations were not fulfilled with respect to the operation of the labour markets. The reforms limited the expansion of employment in some sectors, particularly in tradeable goods. They also created a bias in labour demand for better educated workers which exacerbates inequality. It is thus made clear that the region faces major challenges both in increasing the number of jobs and improving job equality.

Stable, higher income democracies often gave both a strong middle class and relatively low levels of inequality. Lower and middle income countries with highly unequal patterns of income distribution and stratified social structures often have a weak middle class, more social conflict and a tendency to populist and/or authoritarian politics. This publication investigates, for a sample of more than 120 countries, some empirical correlations between the size of a middle class and the following set of variables: the level (mean) of per capita income and wealth, the degree of inequality (Gini coefficients) of per capita income and wealth, the level and composition of public expenditure, the share of small and medium size

enterprises in employment and output and an indicator of democracy.

Scientific understanding of fluid flow in rock fractures--a process underlying contemporary earth science problems from the search for petroleum to the controversy over nuclear waste storage--has grown significantly in the past 20 years. This volume presents a comprehensive report on the state of the field, with an interdisciplinary viewpoint, case studies of fracture sites, illustrations, conclusions, and research recommendations. The book addresses these questions: How can fractures that are significant hydraulic conductors be identified, located, and characterized? How do flow and transport occur in fracture systems? How can changes in fracture systems be predicted and controlled? Among other topics, the committee provides a geomechanical understanding of fracture formation, reviews methods for detecting subsurface fractures, and looks at the use of hydraulic and tracer tests to investigate fluid flow. The volume examines the state of conceptual and mathematical modeling, and it provides a useful framework for understanding the complexity of fracture changes that occur during fluid pumping and other engineering practices. With a practical and multidisciplinary outlook, this volume will be welcomed by geologists, petroleum geologists, geoengineers, geophysicists, hydrologists, researchers, educators and students in these fields, and public officials involved in geological projects.

The publication examines the main characteristics of Argentine manufacturing industry and the development phases (going back more than a century), especially, concentrates on its structural features during the 1980s and on the changes that have occurred since the Convertibility Plan was introduced - between 1991 and 2001 - the most recent transformations between 2002 and 2006 and, finally, in the last section it analyses the possibilities of strengthening the development of competitiveness and the ways to industrial development.

Since the 1990 's Latin American and Caribbean countries, have advanced in the process of setting up national mechanisms for the advancement of women and have managed to carve out a formal space in the state apparatus as part of the democratisation process that has transpired in the region in the past few years. In the more developed countries in the region truly significant advances have been accomplished in recent years. The study examines the creation and development of new secondary mechanisms which have come to complement and support the efforts of the principal national machineries which have maintained their normative responsibilities of promoting public policies.
