Hot Splicing Material 2 - REMA TIP TOP

Step splicing techniques are normally preferred for better hot vulcanization of conveyor belt. Bias cut should be $0.4 \times B$, where B is width of belt. Let us consider, if we have conveyor belt of having width of 1400 mm then we must have to take bias cut of dimension of 560 mm. Direction of splicing step

Conveyor belt splicing can be made in three ways: – First type is the classic vulcanization, called: ” hot vulcanization ” which is made with a vulcanizing press at a temperature of 145-155 ° C. – The second vulcanization type is the “ warm vulcanizing ” . This type of vulcanizing is realized with special materials, developed by Rema Tip Top, called WK materials.

Conveyor belt splicing – Top Rubber Service
rema tiP tOPstands for innovative development in conveyor belt splicing technology. Our accumulated expertise has produced intelligent solutions for on-site conveyor belt splicing. Our goal is to minimize downtime and increase productivity. In order to achieve these targets utilize the
