In topology, a branch of mathematics, a topological manifold is a topological space (which may also be a separated space) which locally resembles real n -dimensional space in a sense defined below. Topological manifolds form an important class of topological spaces

surface. The only
higher-dimensional

Get Free Introduction To

manifold that we can easily visualize is Euclidean 3-space (or parts of it). But it is not hard to construct subsets of higher-dimensional Euclidean spaces that might reasonably be called manifolds.

First, any open subset of \mathbb{R}^n is an n -manifold for obvious reasons.
