It is an unusual event for a textbook covering such a national and international networks and the use of highly specialized field as contact dermatitis to be standardized methodology, a highly differentiated published in its fourth edition within a time period picture can now be painted; we know the major p- of 13 years. “The 2012 Emergency Response Guidebook (ERG2008) was developed jointly by Transport Canada (TC), the U.S. Department of Transportation (DOT), the Secretariat of Transport and Communications of Mexico (SCT) and with the collaboration of CIQUIME (Centro de Información Química para Emergencias) of Argentina, for use by fire fighters, police, and other emergency services personnel who may be the first to arrive at the scene of a transportation incident involving dangerous goods. It is primarily a guide to aid first responders in quickly identifying the specific or generic hazards of the material(s) involved in the incident, and protecting themselves and the general public during this initial response phase of the incident”–P. 2.

Over 10 years have passed since the first edition of The Mediastinum was published in 1977. I have been very gratified by the response to the first edition and determined to do a second edition as soon as possible. However, good intentions are sometimes difficult to achieve and a decade has passed. This period has been one of enormous growth in the discipline of diagnostic imaging. In the study of the mediastinum, computed tomog raphy, and more recently magnetic resonance, have revolutionized our diagnostic capabilities. This second edition of the mediastinum is in tended to emphasize the importance of these modalities to the evalua tion of mediastinal disease. In addition, an attempt will be made to integrate into the text the many new and important observations relat ing to all aspects of mediastinal imaging which have appeared in the literature since 1977. The overall emphasis, however, will remain the same: that accurate radiologic diagnosis is based upon a thorough understanding of corre lated radiographic anatomy and pathology. No matter what the imag ing modality, this principle remains fundamental to each and every radiographic interpretation. I would like to express once again my deep appreciation to Dr. Stephen A. Kieffer, Chairman of the Department of Radiology at the State University of New York Health Science Center at Syracuse for his continued support and encouragement.
