In general, procedures may include: Cleft lip repair. To close the separation in the lip, the surgeon makes incisions on both sides of the cleft and creates flaps of tissue. The flaps are then stitched together, including the lip muscles. The repair should create a more normal lip appearance, structure and function.

Postoperative care of cleft lip and palate surgery is largely underdiscussed and a set of fixed guidelines will help the treating surgeon to provide the most comprehensive care to the cleft patients. The authors review the practices followed at their hospitals—a high volume cleft and craniofacial care center, a tertiary care multispeciality teaching hospital, and a community teaching and training hospital.
