"You can be lonely anywhere, but there is a particular flavor to the loneliness that comes from living in a city, surrounded by thousands of strangers. The Lonely City is a roving cultural history of urban loneliness, centered on the ultimate city: Manhattan, that teeming island of gneiss, concrete, and glass. What does it mean to be lonely? How do we live, if we're not intimately involved with another human being? How do we connect with other people, particularly if our sexuality or physical body is considered deviant or damaged? Does technology draw us closer together or trap us behind screens? Olivia Laing explores these questions by travelling deep into the work and lives of some of the century's most original artists, among them Andy Warhol, David Wojnarowicz, Edward Hopper, Henry Darger and Klaus Nomi. Part memoir, part biography, part dazzling work of cultural criticism, The Lonely City is not just a map, but a celebration of the state of loneliness. It's a voyage out to a strange and sometimes lovely island, adrift from the larger continent of human experience, but visited by many - millions, say - of souls"--

Plug-in electric vehicles are coming. Major automakers plan to commercialize their first models soon, while Israel and Denmark have ambitious plans to electrify large portions of their vehicle fleets. No technology has greater potential to end the United States' crippling dependence on oil, which leaves the nation vulnerable to price shocks, supply disruptions, environmental degradation, and national security threats including terrorism. What does the future hold for this critical technology, and what should the U.S. government do to promote it? Hybrid vehicles now number more than one million on America's roads, and they are in high demand from consumers. The next major technological step is the plug-in electric vehicle. It combines an internal combustion engine and electric motor, just as hybrids do. But unlike their precursors, PEVs can be recharged from standard electric outlets, meaning the vehicles would no longer be dependent on oil. Widespread growth in the use of PEVs would dramatically reduce oil dependence, cut driving costs and reduce pollution from vehicles. National security would be enhanced, as reduced oil dependence decreases the leverage and resources of petroleum exporters. Brookings fellow David Sandalow heads up an authoritative team of experts including former government officials, private-sector analysts, academic experts, and nongovernmental advocates. Together they explain the current landscape for PEVs: the technology, the economics, and the implications for national security and the environment. They examine how the national interest could be served by federal promotion and investment in PEVs. For example, can tax or procurement policy advance the cause of PEVs? Should the public sector contribute to greater research and development? Should the government insist on PEVs to replenish its huge fleet of official vehicles? Plug-in electric vehicles are coming. But how soon, in what numbers, and to what effect? Federal policies in the years ahead will go a long way toward answering those questions. David Sandalow and his colleagues examine what could be done in that regard, as well as what should be done.

“ This is essential reading for anyone seeking to compete – and succeed – in the flat world. ” – John Hagel, Chairman of Deloitte Center of Innovation “ *Competing in a Flat World* provides an extraordinary glimpse into a new kind of organizational architecture, one built around the notion of orchestrating resources you don ’ t control and doing so in a way that builds both trust and agility. This architecture may well turn out to be the dominant model of the firm for the 21st century. This book is a must read for anyone who wants to compete in a flat world. Every chapter details new and powerful ideas. ” – John Seely Brown, Former Chief Scientist of Xerox

Corporation and coauthor of *The Only Sustainable Edge* “ We are led by unstoppable economic forces to connect our resources to form smart networks, either wired or unwired. The authors bring forward the notion of ‘ network orchestration,’ an almost one-size-fits-all strategy for organizations to survive and excel in an ever-flattening world.” –John Chen, Sybase Chairman, CEO and President In the “ flat world,” everything changes...above all, what it takes to run a winning company. Success is less about what the company can do itself and more about what it can connect to. Find out how it ’ s done, from the company that pioneered “ flat world ” success, Li & Fung, which produces more than \$8 billion in garments and other goods for the world ’ s top brands and retailers – without owning a single factory. Victor and William Fung and Jerry Wind, author of the best-selling *The Power of Impossible Thinking*, reveal how they ’ ve replaced “ old-fashioned ” infrastructure and huge employee bases with a fluid, ever-changing network that can design, manufacture, and deliver almost anything, anywhere. The key to success in this world is a set of principles for “ network orchestration,” described for the first time in this book. They examine how these principles can be applied in manufacturing, services and other industries. They show how to build and orchestrate your own world-class global network. * Compete “ network vs. network ” –and win! * Create a “ big-small ” company that combines scale and agility * Forge loose-tight relationships with suppliers * Balance control with empowerment, stability with renewal * Manage the “ bumps ” in the flat world – from politics to terrorism Visit the authors' website: www.competinginaflatworld.net

This report analyses all aspects of cultural diversity, which has emerged as a key concern of the international community in recent decades, and maps out new approaches to monitoring and shaping the changes that are taking place. It highlights, in particular, the interrelated challenges of cultural diversity and intercultural dialogue and the way in which strong homogenizing forces are matched by persistent diversifying trends. The report proposes a series of ten policy-oriented recommendations, to the attention of States, intergovernmental and non-governmental organizations, international and regional bodies, national institutions and the private sector on how to invest in cultural diversity. Emphasizing the importance of cultural diversity in different areas (languages, education, communication and new media development, and creativity and the marketplace) based on data and examples collected from around the world, the report is also intended for the general public. It proposes a coherent vision of cultural diversity and clarifies how, far from being a threat, it can become beneficial to the action of the international community.
