This book provides a comprehensive review of recent innovations in food science that are being used to tackle the challenges of food safety, nutritional security and sustainability. With a major focus on developing nations, like India, the book is divided into four main sections. The first section provides an overview of the food industry, while the second explores food safety in various segments, with an interesting account of street food safety – an important, yet often neglected aspect for safety parameters. The third section, on

nutritional security and sustainability, explores various ways of maximizing nutrition and optimizing waste management in the food industry. The book closes with a section on emerging technologies and innovations, which introduces readers to some of the latest technologies in the food industry, including advances in food processing, packaging, nanotechnology, etc. The topics have been divided into 25 different chapters, which offer a diverse blend of perspectives on innovations in the developing world. Ideally suited for students and researchers in the food sciences, the book is also an interesting read for industry experts in Food Science and Technology.

This second edition laboratory manual was written to accompany Food Analysis, Fourth Edition, ISBN 978-1-4419-1477-4, by the same author. The 21 laboratory exercises in the manual cover 20 of the 32

chapters in the textbook. Many of the laboratory exercises have multiple sections to cover several methods of analysis for a particular food component of characteristic. Most of the laboratory exercises include the following: introduction, reading assignment, objective, principle of method, chemicals, reagents, precautions and waste disposal, supplies, equipment, procedure, data and calculations, questions, and references. This laboratory manual is ideal for the laboratory portion of undergraduate courses in food analysis.

Standard Methods for the analysis of Oils, Fats and Derivatives Sixth Edition, Part 1 (Sections I and II) describes the methods of analysis, which have been adopted and edited by the Commission on Oils, Fats and Derivatives. This book is composed of two sections. The first section deals with the presentation of standard methods and procedure for oleaginous seeds and fruits analysis of oil, fats, and their derivatives. The next section describes the determination procedure of physico-chemical properties of determined oil, fats, and derivatives. Such characteristics include density, refractive index, color, dilatation, acid, ester, iodine value, and moisture and volatile matter content This book will prove useful to analytical chemists and researchers in the
