This book critically reviews advances in our understanding of the biology of vascular epiphytes since Andreas Schimper's 1888 seminal work. It addresses all aspects of their biology, from anatomy and physiology to ecology and evolution, in the context of general biological principles. By comparing epiphytes with non-epiphytes throughout, it offers a valuable resource for researchers in plant sciences and related disciplines. A particular strength is the identification of research areas that have not received the attention they deserve, with conservation being a case in point. Scientists have tended to study pristine systems, but global developments call for information on epiphytes in human-disturbed systems and the response of epiphytes to global climate change.

A new group of Americans is challenging the reign of the Religious Right Today, nearly one in five Americans are nonbelievers - a rapidly growing group at a time when traditional Christian churches are dwindling in numbers - and they are flexing their muscles like never before. Yet we still see almost none of them openly serving in elected office, while Mitt Romney, Rick Santorum, and many others continue to loudly proclaim the myth of America as a Christian nation. In Nonbeliever Nation, leading secular advocate David Niose explores what this new force in politics means for the unchallenged dominance of the Religious Right. Hitting on all the hot-button issues that divide the country – from gay marriage to education policy to contentious church-state battles – he shows how this movement is gaining traction, and fighting for its rights. Now, Secular Americans—a group comprised not just of atheists and agnostics, but lapsed Catholics, secular Jews, and millions of others who have walked away from religion—are mobilizing and forming groups all over the country (even atheist clubs in Bible-belt high schools) to challenge the exaltation of religion in American politics and public life. This is a timely and important look at how growing numbers of nonbelievers, disenchanted at how far America has wandered from its secular roots, are emerging to fight for equality and rational public policy.

A frank and entertaining memoir, from the daughter of Edward Said, about growing up second-generation Arab American and struggling with that identity. The daughter of a prominent Palestinian father and a sophisticated Lebanese mother, Najla Said grew up in New York City, confused and conflicted about her cultural background and identity. Said knew that her parents identified deeply with their homelands, but growing up in a Manhattan world that was defined largely by class and conformity, she felt unsure about who she was supposed to be, and was often in denial of the differences she sensed between her family and those around her. The fact that her father was the famous intellectual and outspoken Palestinian advocate Edward Said only made things more complicated. She may have been born a Palestinian Lebanese American, but in Said's mind she grew up first as a WASP, having been baptized Episcopalian in Boston and attending the wealthy Upper East Side girls' school Chapin, then as a teenage Jew, essentially denying her true roots, even to herself—until, ultimately, the psychological toll of all this self-hatred began to threaten her health. As she grew older, making increased visits to Palestine and Beirut, Said's worldview shifted. The attacks on the World Trade Center, and some of the ways in which Americans responded, finally made it impossible for Said to continue to pick and choose her identity, forcing her to see herself and her passions more clearly. Today, she has become an important voice for second-generation Arab Americans nationwide.

Since the turn of the century the use of computer-mediated-communication (CMC) has become more widespread in educational contexts and weblogs (blogs), one of the more popular forms of CMC (Bloch, 2007), have been the focus of numerous studies. However, whilst these studies have listed the potential benefits of blog use for language learners, few studies have offered any practical tips for educators who wish to implement the use of writing blogs in the EFL classroom. Moreover, the vast majority of studies have focused on the use of blogs with relatively high-level learners in academic contexts. This small-scale study focuses on how the use of blogs impact on the writing of a group of low-level learners in a tertiary EFL context in Chile. Moreover, it presents a tentative model to explain the different factors that contribute to writing development using weblogs as these learners grapple "not only with a written code but with a linguistic code that is still being acquired" (Raimes, 1985: 232). The findings report that blogs have the potential to aid low-level learners develop their L2 writing, and a number of suggestions are made that may help practitioners facilitate the process.

Gluten is found in an extraordinary number of foods, yet it can be problematic for so many of us. Whether you need to cut gluten out of your diet or you're cooking for friends and family with gluten intolerance, River Cottage Gluten Free will provide the tools you need to gain inspiration and navigate mealtimes. Nutrition expert Naomi Devlin gives clear advice for gluten-free eating – including detailed guidance on alternative flours, methods of fermentation and delicious baking ideas. She offers 120 ingenious recipes for breakfasts, bread, pastry, soups, salads, snacks, main meals and puddings, including Prosciutto and egg muffins, Blinis with crème fraîche and smoked salmon, Leek and bacon quiche, Courgette hummus, Blackberry bakewell tart, Luscious lemon cake and Chocolate fondants. With an introduction by Hugh Fearnley-Whittingstall and helpful tips from Naomi throughout, this definitive gluten-free cookbook will add fresh vitality to your cooking and eating, and a host of recipes to make you feel great.

Packed full of fun and easy recipes and baking know-how for kids and parents to share, Mommy & Me Bake is the perfect introduction to the wonderful world of baking. Divided into cookies, cakes, bread, and pastry, Mommy & Me Bake guides readers through the different types of baking. Simple recipes are shown step-by-step, and key skills are explained on accessible and fun fact pages. Kids and parents will learn to create sweet and savory treats while mastering the basics of baking together.

With the ever increasing volume of data, data quality problems abound. Multiple, yet different representations of the same real-world objects in data, duplicates, are one of the most intriguing data quality problems. The effects of such duplicates are detrimental; for instance, bank customers can obtain duplicate identities, inventory levels are monitored incorrectly, catalogs are mailed multiple times to the same household, etc. Automatically detecting duplicates is difficult: First, duplicate representations are usually not identical but slightly differ in their values. Second, in principle all pairs of records should be compared, which is infeasible for large volumes of data. This lecture examines closely the two main components to overcome these difficulties: (i) Similarity measures are used to automatically identify duplicates when comparing two records. Well-chosen similarity measures improve the effectiveness of duplicate detection. (ii) Algorithms are developed to perform on very large volumes of data in search for duplicates. Well-designed algorithms improve the efficiency of duplicate detection. Finally, we discuss methods to evaluate the success of duplicate detection. Table of Contents: Data Cleansing: Introduction and Motivation / Problem Definition / Similarity Functions / Duplicate Detection Algorithms / Evaluating Detection Success / Conclusion and Outlook / Bibliography

Over the past decade, significant advances in the fields of stem cell biology, bioengineering, and animal models have converged on the discipline of regenerative medicine. Significant progress has been made leading from pre-clinical studies through phase 3 clinical trials for some therapies. This volume provides a state-of-the-art report on tissue engineering toward the goals of tissue and organ restoration and regeneration. Examples from different organ systems illustrate progress with growth factors to assist in tissue remodeling; the capacity of stem cells for restoring damaged tissues; novel synthetic biomaterials to facilitate cell therapy; transplantable tissue patches that preserve three-dimensional structure; synthetic organs generated in culture; aspects of the immune response to transplanted cells and materials; and suitable animal models for non-human clinical trials. The chapters of this book are organized into six sections: Stem Cells, Biomaterials and the Extracellular Environment, Engineered Tissue, Synthetic Organs, Immune Response, and Animal Models. Each section is intended to build upon information presented in the previous chapters, and set the stage for subsequent sections. Throughout the chapters, the reader will observe a common theme of basic discovery informing clinical translation, and clinical studies in animals and humans guiding subsequent experiments at the bench.
