## Sheep Kidney Dissection Lab Report

APHY 101 Sheep Kidney Dissection. Abstract The focus of this experiment is on the dissection of a kidney. The human urinary system consists of two kidneys, two ureters, one urinary bladder, and one urethra. This system has two basic functions, both of which occur in the kidneys. The first function is to remove nitrogenous wastes (such as creatine, urea, and uric acid) from the body.

Sheep Kindey Dissection Lab Report - old.dawnclinic.org

The kidney was placed into the dissection tray and examined thoroughly prior to dissection. Identification of the ureter and blood vessels was performed. A knife was used to make a coronal cut of the kidney in order to examine the interior structures. Photographs were taken as structures were identified. The sheep kidney is very similar to a human kidney.

## YOUR GUIDE TO DISSECTION - Philip Harris

This is a plain preserved specimen. Dissect the kidney of an adult sheep to discover the location and/or look of parts of the kidney, such as the renal artery, the renal pelvis, the ureter, the renal cortex, and more. Due to limited availability of sheep kidneys, we may occasionally substitute pig kidneys. Pig kidneys are slightly larger, just as easy to dissect, and have identical external and internal features.
